Degree: B.E - AI & DS

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
    Output: Forward Playlist: a b c
    Backward Playlist: c b a
    Answer
    #include <stdio.h>
    #include <stdlib.h>
    struct Node {
   char item;
      struct Node* next;
      struct Node* prev;
    }:
    // You are using GCC
    void insertAtEnd(struct Node** head, char num) {
      struct Node*newnode=(struct Node*)malloc(sizeof(struct Node));
      newnode->item=num:
      newnode->next=NULL;
      newnode->prev=NULL;
      if(*head==NULL){
       head=newnode;
else{
```

```
struct Node *pos=*head;
         while(pos->next!=NULL){
           pos=pos->next;
         pos->next=newnode;
         newnode->prev=pos;
       }
    void displayForward(struct Node* head) {
       struct Node*pos=head;
       while(pos!=NULL){
         printf("%c ",pos->item);
         pos=pos->next;
printf("\n");
    void displayBackward(struct Node* tail) {
       struct Node*pos=tail;
       while(pos!=NULL){
         printf("%c ",pos->item);
         pos=pos->prev;
       }
    void freePlaylist(struct Node* head){
    int main() {
       struct Node* playlist = NULL;
       char item;
       while (1) {
         scanf(" %c", &item);
         if (item == '-') {
           break;
         insertAtEnd(&playlist, item);
                                                     241801051
     struct Node* tail = playlist;
       while (tail->next != NULL) {
```

24,180,105,1

```
printf("Forward Playlist: ");
displayForward(playlist);
printf("Backward Playlist: ");
displayBackward(tail);
freePlaylist(playlist);
return 0;
}
Status: Correct
